DETAILED ACTION

1. This office action is responsive to amendment filed on 05/22/2006. Claims 1-13, 18,20,21,23,24,26 are pending. Claims 14-17,19,22,25,27 are canceled.

Examiner made a call to Mathew Fagan on 06/15/2006 and specified the reason for allowance of independent claims 18 and 24 that includes "repeating the developing and the selecting until changes in the objective parameter values fall below a predetermined threshold". Since the independent claim 1 does not have that feature therefore distinction of inventions is established and the office issues the follow restriction election.

RESTRICTION ELECTION

2. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims 1-13 draw to determining a set of objective parameters for the circuit; receiving noise constraints for the circuit; and optimizing values of the objective parameters based on the noise constraints.

Group 2, claims 18,20,21,23,24,26 draw to developing a set of sensitivity factors based on the objective parameters and timing constraints to meet noise constraints for the circuit, the sensitivity factors characterizing a noise sensitivity of the circuit, the developing to include allocating initial delay targets to a plurality of nodes in the circuit, the delay targets to meet the noise constraints, setting initial objective parameter values in accordance with the noise constraints by selecting continuously tunable components of the objective parameter values, the initial objective parameter values to define static logic settings, and repeating the allocating and the setting for adjusted delay target; selecting objective parameter values based on the sensitivity factors, the objective parameter values minimizing power costs to the circuit; and repeating the developing

and the selecting until changes in the objective parameter values fall below a predetermined threshold.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by

a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
